

HSE ORIENTATION

EMPLOYEE, VISITOR, CUSTOMER (RETAIL, CPU), CONTRACTOR

McASPHALT

INTRODUCTION

Welcome to McAsphalt! Please start your orientation with this short video.

Introducing McAsphalt Industries Limited

HEALTH, SAFETY, ENVIRONMENT, QUALITY POLICY

The McAsphalt HSEQ Policy is intended to reflect how we as a company manage our exposure to risk in the workplace.

Our Policy demonstrates the attitude and Leadership Commitment towards HSEQ with the steps, arrangements, and systems the company has in place to ensure compliance with all requirements including HSEQ and Legal.

McAsphalt ensures that all employees are made aware of our HSEQ Policy, which is publicly available, gets reviewed during the onboarding process and during returning employee orientations.

The Policy is reviewed annually, or when deemed necessary by Senior Leadership. Once the review in complete, the Policy will be re-approved by the President of McAsphalt, then distributed and made available through the appropriate channels.

- McAsphalt utilizes a combination of Health, Safety, Environmental and Quality Management Systems relating to the business unit needs while acknowledging and meeting all applicable regulatory and legislative requirements.
- McAsphalt cultivates risk-based thinking and knowledge sharing which emphasizes our actionable commitment towards continual improvement while strengthening our corporate culture of excellence.
- The Policy's update and release will be in accordance with or as prescribed by the applicable management system.

OUR GUIDING PRINCIPALS INCLUDE:

- Leadership
- Accountability
- Compliance
- Conservation
- Prevention
- Customer Focus and
- Continual Improvement

This is complimented by our Company Values of Sharing, Caring and Daring:

LIVING GOAL ZERO!

WORK SAFE – HOME SAFE

At McAsphalt, employee safety & wellbeing is at the core of everything we do.

We follow our Living Goal Zero Program to guide us to success in achieving Goal Zero. By embedding our Lifesaving Icons and everyday Behaviours in all our systems at work, we provide a common framework towards ensuring a safe working environment for everyone.

We encourage all visitors & contractors to report any Unsafe Acts or Conditions to the Responsible Manager or HSE Department for further investigation.

The program consists of 8 Core and 5 Supplementary Lifesaving Icons. These rules require that we all remain constantly vigilant about what we do and how that affects our wellbeing as well as those around us, thus maintaining a resilient culture of shared responsibility and a Zero Tolerance mindset.

These rules are shared and applied across all Colas Business Units around the world to ensure sustainability.

By adopting all Lifesaving Behaviours, we mitigate the risk of Serious Injuries and Fatalities (SIF)

Please watch the **Living Goal Zero** video and refer to more information below.

CORE ICONS

HAZARD CONTROL

Identify, evaluate, and control hazards before starting work.

A suitable plan must be in place that controls potential hazards in the workplace and the required controls must be communicated to each member of the workforce. Potential hazards and controls must be reviewed each day or for each new task to identify new or unforeseen hazards and amended controls must be agreed and authorized.

FALL PREVENTION

Protect yourself from falls.

Avoid working at height or use collective protection such as barriers or guardrails where possible. Work within a protective environment such as scaffold, man-lift or elevated platform or use fall protection equipment when working at heights. Always use three points of contact when accessing equipment, vehicles, and ladders. Fall hazards include elevated work, getting into or out of vehicles, working near exposed edges or around voids or fragile surfaces.

ROAD SAFETY

Drive and operate equipment safely.

This includes being qualified and authorized to drive a company vehicle on the highway, operating equipment on site, always wearing your seat belt, properly inspecting vehicles or equipment before use, obeying posted speed limits, and never driving or operating a vehicle or equipment while distracted. Road safety hazards include driving on the highway, on a work site and includes on-road and off-road vehicles.

ENERGY ISOLATION

Verify Zero Energy before work begins and use specified lock-out / tag-out equipment where required.

Hazardous energy includes equipment power sources such as electricity or fuels but also includes stored energy in the system such as electric potential, mechanical or kinetic energy, pressure, toxic materials, gases, chemicals, hot liquids, and gravity.

COMPETENCY

You must be adequately trained, experienced, and authorized to complete work tasks, or to operate equipment in the workplace.

Have a valid qualification, certification, or other authorization before you start the work task, or operate work equipment.

HEALTH HAZARDS

Protect yourself from health hazards.

These include exposure to materials, substances or environments that may cause life-altering injuries or conditions. Potential Health Hazards in our business can come from many sources, through inhalation, ingestion, contact, and from the environment. They can cause skin sensitizing/irritating, heat-related illness, and allergic reactions.

IMPAIRMENT

Never work or operate equipment while impaired.

Using alcohol or illegal drugs, or misusing legal drugs or other substances, will reduce your ability to do your job safely. A tired or fatigued worker may also be considered impaired.

LINE OF FIRE

Stay out of danger zones.

These include areas where there is a risk of being run over or backed over by a vehicle or mobile equipment, being struck by an object falling from height, ejected from a system or tool, or getting caught between an object and being crushed. Common activities where Line of Fire hazards are present include the moving/backing of vehicles and equipment, lifting or hoisting, tensioned lines, objects with potential to fall or roll, pressurized systems, electrical equipment, spring-loaded devices, and projectiles.

SUPPLEMENTARY ICONS

EXCAVATION

Before starting trenching and excavation work, ensure that authorization has taken place and that competent persons are in charge and responsible for operations.

Trenching and excavation may contain underground utility hazards, potential confined spaces, and have the potential for collapse of earth, walls and excavated materials.

CONFINED SPACES

Follow the confined space entry procedures before entering a confined space.

Confined spaces, such as silos, tankers, underground storage tanks, vaults, etc. may contain explosive gases, poisonous air, oxygen-deficient atmospheres, or other physical or environmental hazards. Spaces shall be permitted unless determined to not be required by the supervisor-in-charge. Authorized access will keep you safe.

SAFE LIFTING

Lifting activities must be planned, supervised, and carried out by competent people.

Lifting equipment and accessories must be certified and used in the manner for which they were designed. Hazards include failure or collapse of lifting equipment, loss of the load, which can fall on people nearby, or being trapped and crushed by parts of the lifting equipment or load.

OVERHEAD POWER LINES

Work activities must be planned to ensure equipment, objects or personnel do not enter the Minimum Approach Distance around any energized overhead line.

Hazards include electrocution or fire whenever the electricity finds a path to ground, touch potential of any object in contact with the line, or step potential where electricity is discharged in the ground. Electricity can jump a significant distance so direct contact with the line does not have to be made. In addition, lines can remain energized even when the power is turned off, so always treat any line as energized.

WORKING OVER WATER

Personal flotation devices should always be worn when there is a danger of falling into water.

When working near, or on water, wearing a personal flotation device (e.g., life jackets or buoyancy aids) protects you from drowning.

BACK IN / PARKING POLICY

BACK-IN PARKING ONLY signs are located at all McAsphalt locations, indicating the mandatory requirement to back-in when parking anywhere on the property. This is to be adhered to by employees, contractors, and visitors operating light vehicles.

Why do we back in? The simple answer is **“Safety”**.

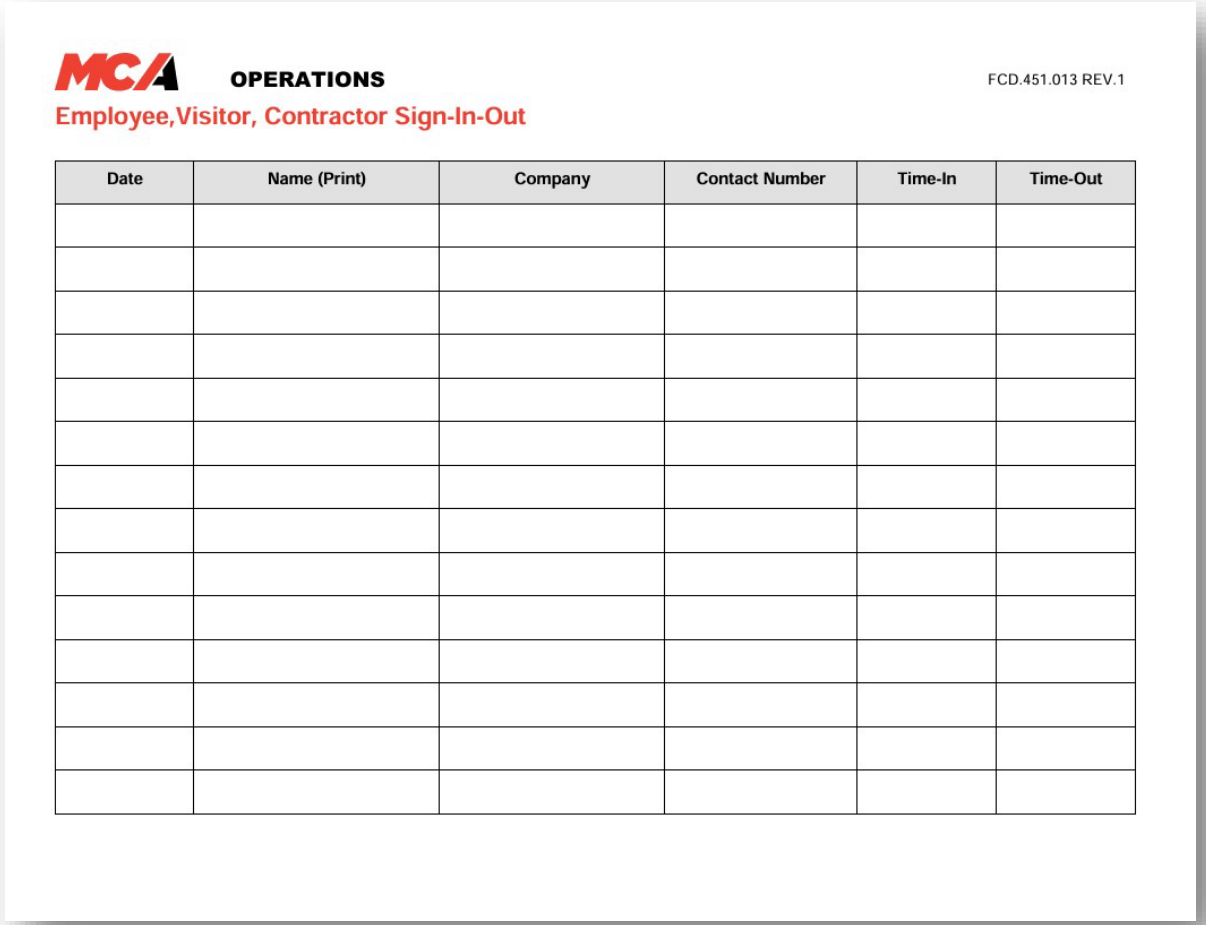

- **Psychological,** how employees park when they arrive at work can affect their behaviour throughout the workday. It naturally triggers thoughts of why it is necessary, and anything that gets us to think about safe behaviour is a good thing.

- **Physical,** back in parking gives the driver a smaller field of vision and requires more concentration. As such, it is safer to do this at the start of your shift, when you are most alert. Also, in case of an emergency a degree of panic arises very quickly. If the need to evacuate arises, it is much quicker and safer to get into your vehicle and drive forward and out.

SIGN IN / SIGN OUT POLICY

- Any time you are entering or leaving a McAsphalt location, you must **sign in** and **sign out** at reception or the scale house. The reception or scale house must always be your first and last point of contact, no matter the purpose of your visit.
- For McAsphalt employees working on site, it is important you notify your supervisor or host when leaving the property, even if it is only for a brief period.

MCA **OPERATIONS** FCD.451.013 REV.1

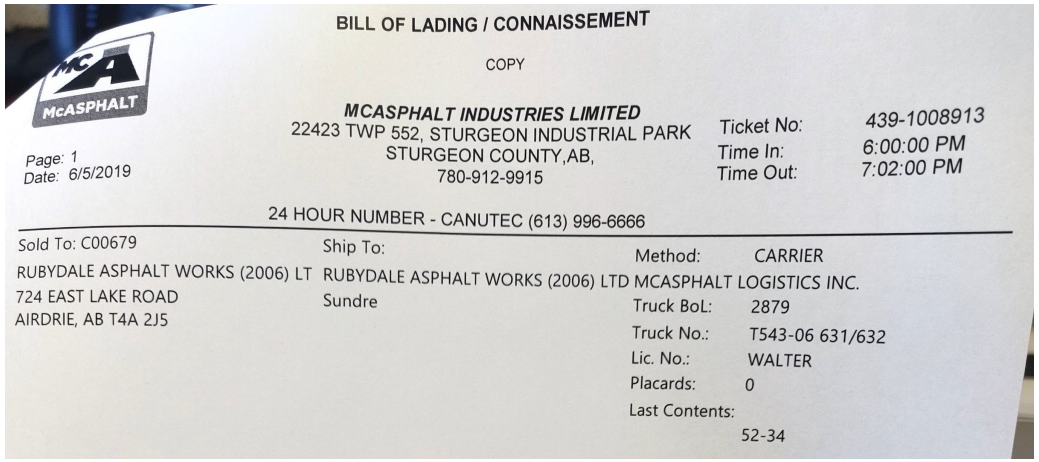

Employee,Visitor, Contractor Sign-In-Out

Date	Name (Print)	Company	Contact Number	Time-In	Time-Out

- Once signed in, you must meet with your McAsphalt host in person.
- No visitor is allowed to wander the premises unaccompanied.
- If in doubt, consult the nearest / first employee you encounter.

DRIVERS ARRIVING ON SITE

- First and foremost, all drivers and / or retail customers must report to the scale house or office upon arrival.
- You must provide the bill of lading, which will be reviewed for last contents contained and actions required, if any, before loading / unloading begins.
- For example, rinsing requirements for loading a cationic emulsion when an anionic emulsion was the last contents contained.
- Verify if the product is regulated under the transportation of dangerous goods (TDG Act). If so, you will need the proper placards and have them securely displayed on each side and end of the means of containment. If unsure, ask a McAsphalt representative for assistance.

WORKPLACE HARASSMENT, DISCRIMINATION & VIOLENCE

The workplace harassment program applies to all managers, supervisors, temporary employees, students, and subcontractors of McAsphalt Industries Ltd, affiliated companies, employees, and along with contractors or others performing work on behalf of McAsphalt.

McAsphalt is committed to providing and maintaining a harassment-free work environment in which all workers are treated with respect and dignity. In pursuit of this goal, McAsphalt does not condone and will not tolerate acts of harassment and/or violence against or by any employee. As such, this policy prohibits physical or verbal threats – with or without the use of weapons – intimidation, or violence and discrimination in the workplace.

Everyone has the right to equal treatment without discrimination or harassment, in the areas covered by the *Human Rights Code*. Workplace discrimination grounds include but are not limited to:

- Race, Ethnic origin, Place of origin, Citizenship,
- Disability, Age, Marital status, Family status
- Colour, Ancestry, Creed (religion)
- Sex, Sexual orientation
- Gender, Gender identity, Gender expression
- Receipt of social assistance
- Record of offenses

DRUG & ALCOHOL POLICY

- All employees, contractors, carriers, and brokers are expected to be fit for duty and in a condition to carry out their assignments and responsibilities. Those occupying safety sensitive positions will be subject to specific testing procedures.
- The consumption, use, manufacture, dispensation, sale, possession, distribution, promotion, provision, purchase, transportation, concealment, transfer or storage of unauthorized, prohibited, illegal or controlled substances and/or substance-related paraphernalia while performing McAsphalt work, on McAsphalt assignment or on McAsphalt premises (including McAsphalt owned or leased vehicles), is strictly prohibited.
- An employee, contractor, carrier, or broker whose off-duty involvement with unauthorized, prohibited, illegal or controlled substances becomes known to McAsphalt may be considered to be in violation of our policy.
- All employees, contractors, carriers, and brokers doing work with or for McAsphalt, whether it be handling and / or transporting product or doing any safety sensitive work, may be required to undergo or provide proof of a drug and alcohol screen that is consistent with the intent and implications of our policy.

PERSONAL PROTECTIVE EQUIPMENT (PPE)

Everyone entering a McAsphalt site must wear or have on their person our minimum PPE as follows:

- Hard Hat
- Safety Glasses
- Clothing covering all limbs
- High Visibility / Reflective Vest or Jacket
- Protective Gloves specific to hazard
- Safety Boots, minimum 6 inch

- Specialized PPE must be worn as required by the activity / hazard. i.e. fall arrest, gas monitors, respirators, PFD, etc.
- Burn Cards to be on your person at all times.
- Heat Resistant sleeves to protect wrists and forearms, Fire Resistant Coveralls and Face Shields to be used for loading / unloading activities, and other tasks involving hot liquid substances as deemed necessary by hazard assessment.
- Wearing of prescribed PPE is mandatory. Failure to comply will lead to your refusal to enter our working area. It is for your own safety as well as of others around you.

**All 3rd Parties and Contractors need to provide their own PPE.*
***PPE to be put on at sign in or scale, whichever comes first.*
****All equipment needs to be CSA Approved.*

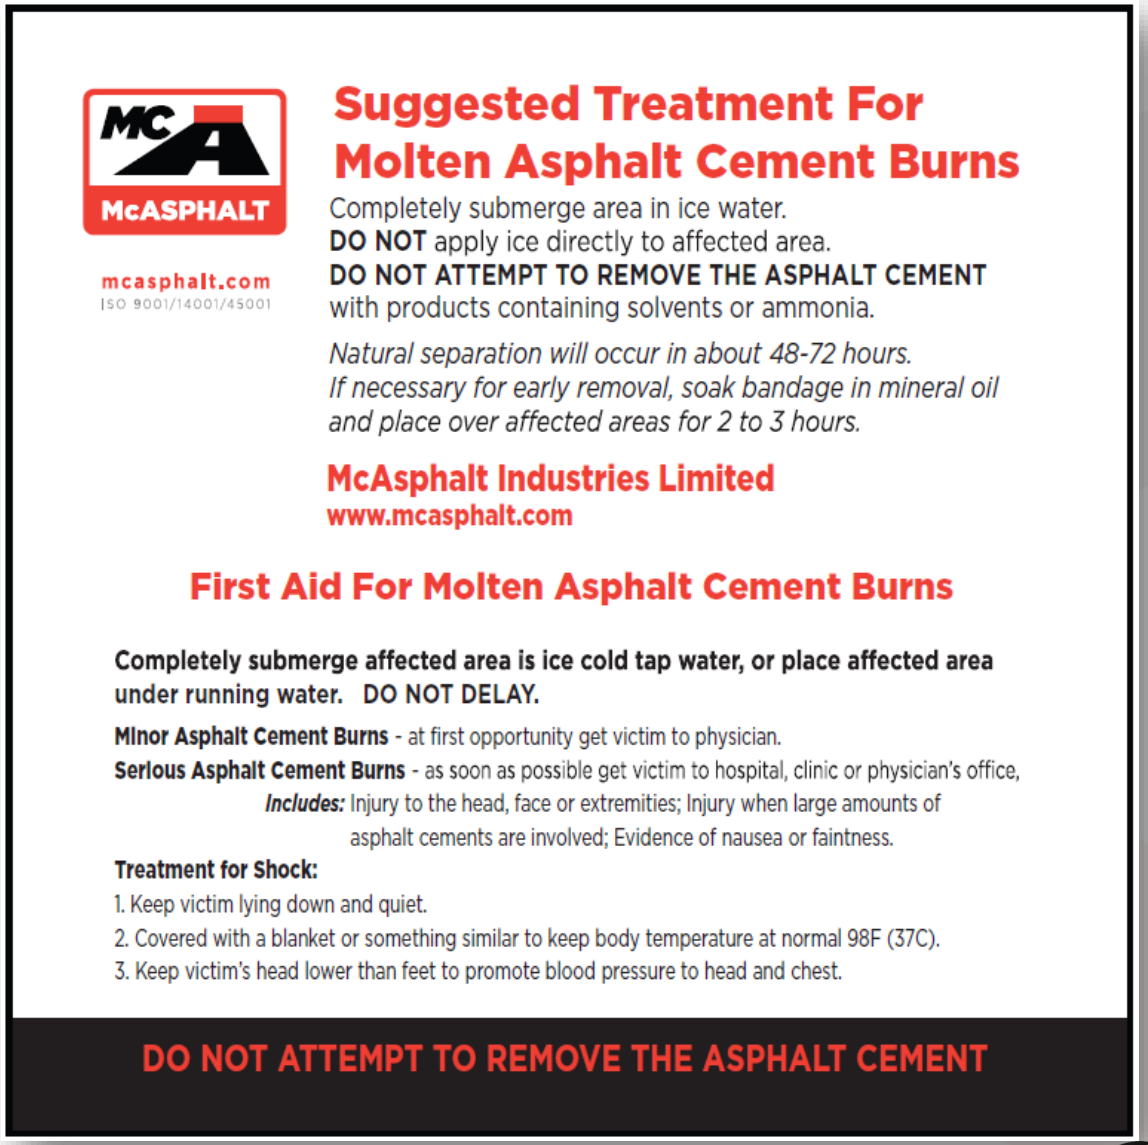

EMERGENCY SAFETY EQUIPMENT

All McAsphalt locations are equipped with the following:

- A list of staff trained in First-Aid, CPR, and AED
- First-Aid Kits
- AED's
- Fire Extinguishers
- Emergency Eyewash / Shower Stations
- Evacuation Routes
- Burn Kits

**If exposed to molten asphalt, completely submerge in cold water and do not attempt to remove. Seek medical attention!*

All the above are identified on the Emergency Response site plan or HSE board. Please review with the site representative.

McASPHALT

mcasphalt.com
ISO 9001/14001/45001

Suggested Treatment For Molten Asphalt Cement Burns

Completely submerge area in ice water.
DO NOT apply ice directly to affected area.
DO NOT ATTEMPT TO REMOVE THE ASPHALT CEMENT with products containing solvents or ammonia.

Natural separation will occur in about 48-72 hours.
If necessary for early removal, soak bandage in mineral oil and place over affected areas for 2 to 3 hours.

McAsphalt Industries Limited
www.mcasphalt.com

First Aid For Molten Asphalt Cement Burns

Completely submerge affected area is ice cold tap water, or place affected area under running water. DO NOT DELAY.

Minor Asphalt Cement Burns - at first opportunity get victim to physician.
Serious Asphalt Cement Burns - as soon as possible get victim to hospital, clinic or physician's office,
Includes: Injury to the head, face or extremities; Injury when large amounts of asphalt cements are involved; Evidence of nausea or faintness.

Treatment for Shock:
1. Keep victim lying down and quiet.
2. Covered with a blanket or something similar to keep body temperature at normal 98F (37C).
3. Keep victim's head lower than feet to promote blood pressure to head and chest.

DO NOT ATTEMPT TO REMOVE THE ASPHALT CEMENT

McASPHALT

GOAL ZERO OBJECTIF ZERO

EMERGENCY PREPAREDNESS

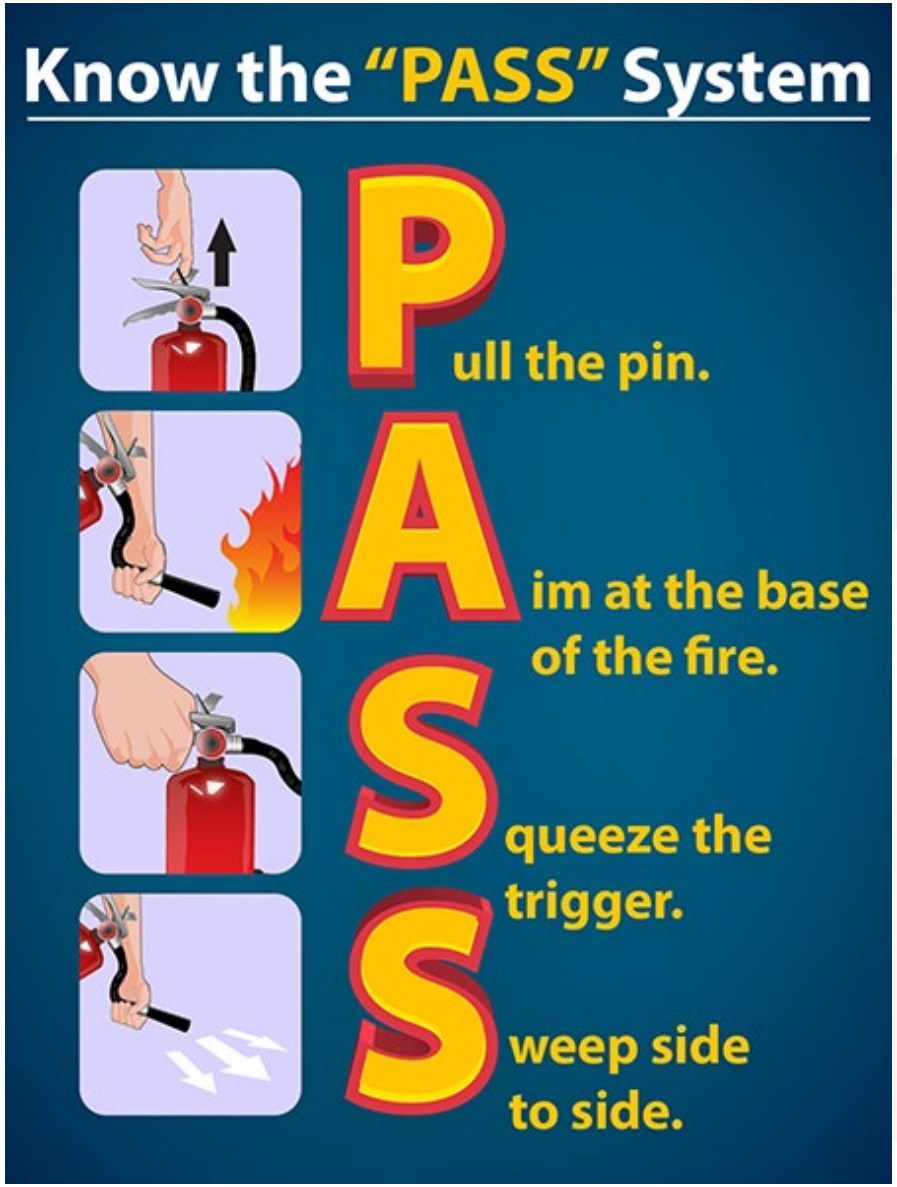

IN THE EVENT OF A FIRE OR EMERGENCY:

- 1. In the event a fire is discovered that is beyond control or you hear an alarm, ensure your safety, then check the area for others.
- 2. Leave the area and close doors behind you. Do not open any unnecessary doors on your way to the exit.
- 3. Activate alarm.
- 4. Call in the Alarm (911)
- 5. Meet in the designated area (Muster Point) for a headcount to ensure all persons have evacuated.
- 6. Secure the area for fire department and emergency vehicle access.
- 7. Remain at a safe distance to provide information to emergency personnel and ensure that all personnel are accounted for.

FIRE PREVENTION

- Good housekeeping is essential in the prevention of fires.
- Fires can start anywhere and at any time. Therefore, it is important to know which fire extinguisher to use, where it is located, and how to use it.
- Always keep fire extinguishers visible, free from obstacles, and easy to retrieve.
- Fire extinguishers must be properly maintained, marked, inspected, and certified for the job.

UNWANTED EVENTS

- It is extremely important to report all Unsafe Acts and Condition, Incidents and Near-Misses to the Responsible Manager, or the nearest McAsphalt employee immediately.

- Anonymous Good-Catch and Near-Miss reporting is available through our Digital HSE Platform, by scanning the QR Code with any mobile device fitted with a camara. For more details, speak to the Responsible Manager.

- Good-Catch and Near-Miss reporting is encouraged as a proactive measure. Information and guideline is displayed around all work areas.

- All employee are permitted to stop any Unsafe Acts and Conditions, violations in Policy or Procedure or any breach in Legal Requirements.

WORKING AT A MCASPHALT WORKSITE

- On the first arrival to site, you must be given a site tour by a McAsphalt Employee.
- It is your responsibility to review and understand all the site's emergency procedures, evacuation routes, muster points, emergency contact numbers and location of fire extinguishers, first aid kits, eyewash stations and emergency showers.
- It is also your responsibility to review and understand all work instructions posted at loading and unloading areas.
- All contractors and drivers must ensure that all their employees have the necessary training as it relates to the specific requirements of their services.
- Customers and visitors are not allowed to conduct work, only partake in tours, meetings and training sessions.
- Every year, all first-time loading / unloading steps must be overseen by a site operator to verify all policies and procedures are being followed.

OTHER GENERAL SITE RULES

- No running in the yard or work areas.
- Intrinsically safe equipment and tools in Dangerous Goods zones.
- Compressed gas bottles, including propane must be secured outside in an approved area and replaced in an upright position, full or empty.
- Smoking is only permitted in designated areas.
- No unauthorised repairs or maintenance on site.
- Cell phones are prohibited in process areas.
- McAsphalt has a ZERO TOLERANCE Policy for violence or harassment in the workplace.
- Wear required PPE as indicated by signage.
- The possession, storage and or consumption of alcohol or illegal drugs on any McAsphalt property are strictly prohibited.

SPECIAL WORK

Before working at McAsphalt, a work permit or work authorization must be issued by a McAsphalt representative.

The following types of work must be declared to McAsphalt.

- Hot work permit
- Confined space permit
- Lock Out / Tag Out authorization
- Lifting & Rigging authorization
- Working at heights authorization

If the scope of the work changes during the day, you must inform McAsphalt, and the permit or authorization needs to be modified, as necessary.

In the event of a site emergency all work must stop, and all work permits and authorizations must be revalidated prior to resuming work.

All special work must be approved prior to starting work and closed out at the end of each shift.

LOADING POLICY

1. Shut engine off and ground truck.
2. 'Drivers' keys will be removed and secured in the lock box.
3. Face shields are required while loading.
4. Drivers are prohibited from operating McAsphalt equipment without explicit permission from facility personnel.
5. Loading Arms must be chained down.
6. All Loads must be monitored.
7. Fume extraction must be turned on during loading operations (where available).
8. After the loading is complete, all equipment must be returned to the storage position before leaving the rack.
9. Ground cables will be removed and a walk-around will be done to declare the area safe, after which the drivers' keys will be returned'.

UNLOADING POLICY

1. Shut engine off, open tanker hatch and ground tanker.
2. Face shields are required while unloading.
3. Drivers are responsible for operating equipment on their trailer.
4. Drivers must ensure their equipment is in good operating condition.
5. Only Facility Operators are responsible for connecting hoses and operating pumps.
6. Drivers must remain at the rear of the truck at all times during offloading.

LOADING / UNLOADING HAZARDS

- All trailers must be grounded first before the loading / unloading process begins.
- Ensure that you have a secure, clean contact.
- Inspect the trailer and confirm its last contained on the bill of lading.
- Avoid breathing fumes exhausting from tanks.
- Hydrogen sulphide (H2S) may be present in asphalt and crude oil fumes which give off a rotten egg odor, that is why a 4-head gas monitor is required.
- Be cautious of water in the trailers. If water or ice is covered by hot asphalt, it will vaporize into steam rapidly and violently, expanding up to sixteen hundred times its volume.
- The driver must be ready and in the appropriate location, top hatch of trailer when loading or rear valve when unloading.
- It is the driver's responsibility to fully insert the loading arm into the tanker, chain it down and monitor the loading process to prevent overfilling the tanker.
- The driver must allow time for the spout to drain fully before removing it from the trailer hatch and placing in the tray.

LOADING PROCEDURE

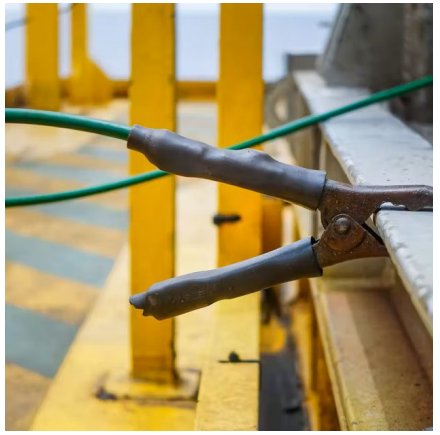

RETAIL CUSTOMERS

- Orders are placed at the scale house with the scale operator.
- If loading liquid bulk, a tare weight must be recorded by the scale operator before leaving the scale.
- If the product requested is a Dangerous Good, a valid TDG licence/certificate must be presented to the scale operator.
- Once your order has been placed, proceed to the loading area as directed by the scale operator.
- Maintain a safe responsible speed of 10 Km/h maximum while on McAsphalt property, unless otherwise posted.
- Ensure you have all the required PPE on, and your vehicle engine is off during the loading process.
- While loading liquid bulk, the vessel must be grounded with a grounding cable. The vessel must not be situated in the same enclosed space where the driver is located. i.e. in the back seats of a van.
- Absolutely no cell phones while in the loading zone.
- Intrinsically safe flashlights only.
- Under no circumstances should you start or stop any pumps. A McAsphalt Operator will instruct you when to open/close the butterfly valve on the wand.

CUTBACKS & SEALANTS

- When working with cutback asphalt always refer to your SDS before loading / unloading to determine the type of cutback and its associated flashpoint, whether it is rapid, medium or slow curing.
- A flashpoint is the temperature at which a substance will ignite when exposed to a source of ignition.
- Sources of ignition include flames, sparks and static electricity. Flashlights can provide this spark, so intrinsically safe flashlights are required for use. These are the only flashlights that are to be used around flammable materials.
- Some solvents and cutback asphalts have low flash points due to the solvent content and can ignite at normal temperatures, even below the freezing point (zero degrees Celsius).
- Objects like pens, sunglasses and even keys can accidentally fall from your pocket and into the trailers, creating a spark and ultimately an explosion.
- Customers purchasing cutback and sealer products must first report to the scale house or main office upon arrival.
- First you will need a valid TDG certificate as some products are regulated by Transport Canada.
- Due to low flashpoints, sealer products are a serious fire concern. No sources of ignition are to be taken into the storage or loading areas, including lighters, cell phones, regular flashlights, or metal that may spark when dropped.
- All vehicles need to be turned off during the loading / unloading process, no exceptions.
- In addition, the tank being filled must be grounded before loading starts.

HIGH TRAFFIC AREAS

- Customers picking up pails and drums can add to an already congested, high traffic, high risk environment for example commercial and other vehicles coming and going throughout the day.
- As a result, the customer must stay in the designated area until instructed to move their vehicle into position for loading by the responsible McAsphalt Representative.
- Unless posted otherwise, the speed limit is 10 km/h on all our sites. The use of a mobile device (cell phone / tablet) while driving is illegal and strictly prohibited.

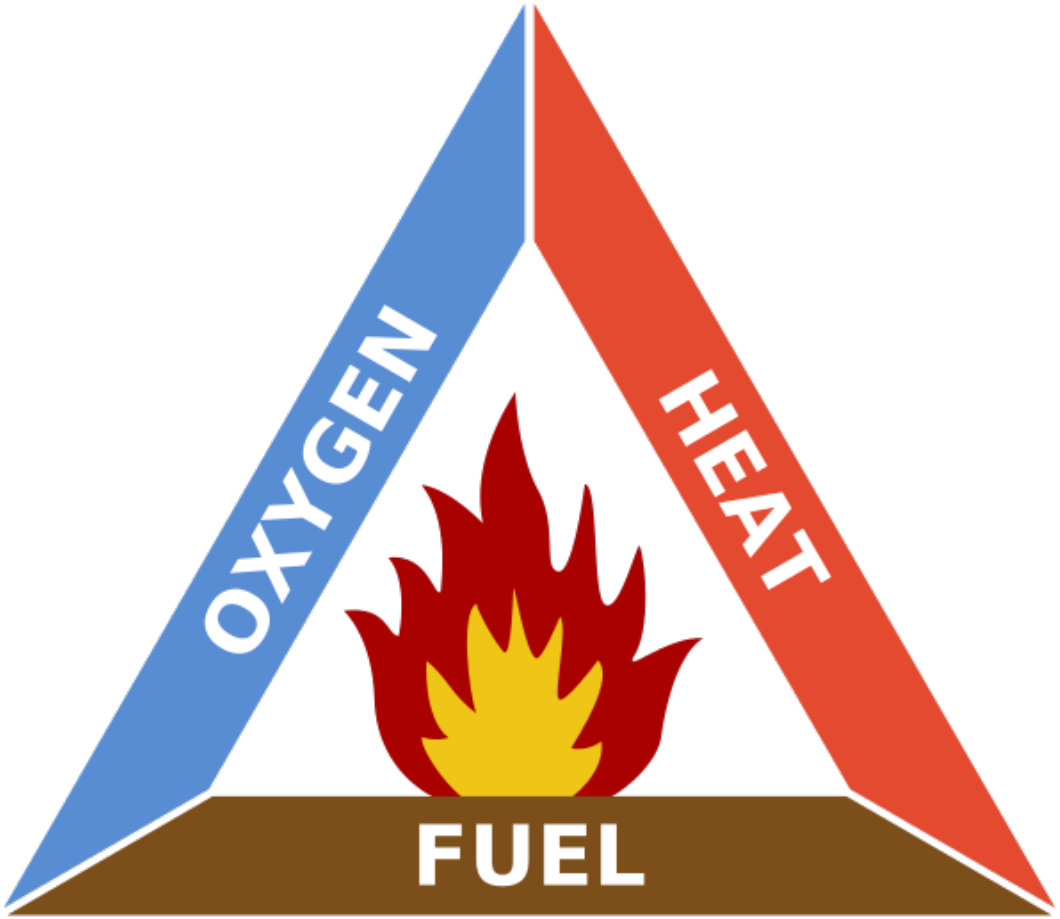

STATIC ELECTRICITY

- Static electricity may come from various sources, especially when liquids freefall from a pipe.
- Static electricity can be the heat or spark from the fire triangle.
- Always ground the trailer first and ensure you insert the loading arm as far into the tank as possible to prevent static electricity building from freefall of liquids.
- All trucks and containers must be grounded before the loading / unloading process begins.

H2S AWARENESS

What is H2S ?

- H2S (hydrogen sulfide) is a hazardous gas often present in the vapour space of tanks, trucks, rail cars, and barge compartments containing liquid asphalt and may be present on our site.
- H2S gas is flammable and colourless. At low concentration it mimics the smell of rotten eggs. At high concentration it becomes odourless.
- **Warning Properties**
- Exposure to low concentrations of H2S may cause irritation to eyes, nose or throat. It may also cause difficulty in breathing for some asthmatics. Brief exposure to very high concentrations of H2S can cause a loss of consciousness and possibly death.
- Hazards controls are in place on our sites and if additional measures are required, they will be mentioned to you at the site-specific orientation.

ENVIRONMENT MANAGEMENT

- McAsphalt has implemented an Environmental Management system focusing on pollution prevention, compliance with all environmental guidelines, standards and regulations, and continual improvement of our environmental performance through regular review and evaluation of our facilities and departments Impacts and Aspects.

- This review will include both direct and indirect aspects where all identified processes and areas will be evaluated. This will include all new processes, products, activities and services.

- McAsphalt will include activities that have positive environmental impact, that reduce the impact of our activities to bolster acceptability including recycling practices, low carbon initiatives and conservation of natural resources and biodiversity.

HAZARDOUS WASTE

- All hazardous waste generated at the worksite, unused hazardous chemicals and related materials including those contaminated must be properly labeled, removed, transported and disposed of in accordance with applicable Environmental Legal Requirements.

- Discharge into drains, sinks or sewers is strictly prohibited on a McAsphalt work location.

- Spills and other releases or impacts to the environment must be reported immediately to the Responsible Manager.

- Any clean up required in the event of accidental Environmental discharge will be coordinated by the Responsible Manager and will most likely include action to be taken by the contractor responsible for the discharge, or at their expense.

Thank you for reviewing our Employee, Visitor, Customer (Retail, CPU) & Contractor HSE Orientation. Please follow the link or QR code below to complete our online quiz and validate your registration.
